DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. **Claims 1-10** are rejected under 35 U.S.C. 103(a) as being unpatentable over Dwyer et al. (US 6,687,508) in view of Cast et al. (US 6,965,777 B1).

Regarding **claims 1, 4 and 8**, Dwyer discloses a method for providing numeric-only paging service (column 1, lines 7-10), the method comprising:

an input to receive DTMF tones constituting a page from a source (column 4, lines 14-23).

Dwyer fails to disclose logic on a converter to convert the DTMF tones to SMPP protocol but suggest that the paging protocol of the voicemail system that convert the DTMF signal includes SMPP (column 4, lines 32-40).

However, Cast teaches logic on a converter to convert the DTMF tones to SMPP protocol (column 5, lines 16-36); and

an output to provide the SMPP protocol to a paging device (column 5, lines 16-36).

Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the invention of Dwyer using the teaching of sending the message as taught by Cast.

This modification of the invention enables the system to have logic on a converter to convert the DTMF tones to SMPP protocol so that the message would be converted by the SMSC system.

Regarding **claims 2, 6 and 10**, Cast teaches an arrangement, further comprising: a Short Message Service Center to receive the SMPP protocol and to form a Short Message Service message (column 5, lines 37-54).

Art Unit: 2614

Regarding **claims 3 and 7**, Cast teaches an arrangement, further comprising: a switching network element to receive the SMS message and to route the SMS message to a paging device (column 5, lines 37-44).

Regarding **claim(s) 5 and 9**, Dwyer discloses a method, further comprising: receiving the DTMF tones from a Public Switched Telephone Network (column 4, lines 14-23).

Response to Arguments

5. Applicant's arguments with respect to **claim(s) 1-10** have been considered but are moot in view of the new ground(s) of rejection.
